

Umbrellas

The basic umbrella was invented over four thousand years ago - evidence of umbrellas was seen in the ancient art and artifacts of Egypt, Assyria, Greece, and China. These ancient umbrellas or parasols, were first designed to provide shade from the sun. The Chinese were the first to waterproof their umbrellas for use as rain protection. They waxed and lacquered their paper parasols in order to use them for rain. The word "umbrella" comes from the Latin root word "umbra", meaning shade or shadow. Starting in the 16th century umbrella became popular to the western world, especially in the rainy weather of northern Europe. At first it was considered only an accessory suitable for women. Then the Persian traveler and writer, Jonas Hanway (1712-86), carried and used an umbrella publicly in England for thirty years, and he popularized umbrella use among men. English gentleman often referred to their umbrellas as a "Hanway." The first all umbrella shop was called "James Smith and Sons". The shop opened in 1830, and is still located at 53 New Oxford St., in London, England.

Leisure, beauty and wellness

Man has always searched for health and wellness in water, which, throughout history, has often been loaded with symbolic and cultural values. Standard belief has it that the origin of the spa dates back to the Roman era, when troopers of their legions fatigued by wars, would take to rejuvenation, relaxation and treatment of sore wounds through water. Hot, natural spring water was considered to be the best cure for wounds and tired muscles. The legionnaires, hence, started building baths around naturally found hot water springs or hot water wells. These baths were popularly called 'aquaee', while the treatments undertaken at these aquae were known as 'Sanus per Aquam' – of that SPA is taken into account to be an acronym – which means health by or through water. Others believe that spa is an ellipsis of the Latin phrase 'Sanitas per Aquas', meaning the same. The Belgian city Spa, which rose to fame in the 14th century in this context, thus got its name, since a thermal spring having curative properties was discovered there.

Office

Sticky notes — also known as Post-it® notes or repositionable notes — are small pieces of paper that feature a light adhesive on the back. The adhesive allows the notes to be attached to a wide variety of documents and surfaces — and removed and reattached multiple times. People all around the world use sticky notes every day, but no one set out to invent sticky notes. Instead, in 1968, Dr. Spencer Silver, a chemist at 3M Company, invented a unique, low-tack adhesive that would stick to things but also could be repositioned multiple times. He was trying to invent a super-strong adhesive, but he came up with a super-weak one instead, and he didn't know what to do with it. In 1974, Art Fry, a colleague of Dr. Silver's at 3M, was singing in his church choir. He became frustrated when the bookmarks he used to mark his place in his hymnal kept falling out. He remembered Dr. Silver's adhesive and tried some on his bookmarks. It worked wonderfully! The bookmarks stayed in place, but he could move and reattach them easily without harming any of the pages. The rest is history.

Note books

Of all the writing materials mankind has employed down through the ages, paper has become the most widely used around the world. Paper has a long history stretching back to ancient Egypt in the third millennium BC. The word 'paper' is derived from papyrus, a plant that was once abundant in Egypt and which was used to produce a thick, paper-like material by the ancient Egyptians, Greeks and Romans. Paper as we know it traces its roots back to China at the beginning of the first millennium AD. Traditional Chinese records give the credit for its development to one T'sai Lun (about 105AD). Originally intended purely for writing and printing purposes, a dazzling array of paper products are available to today's consumer.

Key holders and lanyards

The first key chain was invented in January 1894 by Frederick J. Loudin, an African American scientist, a talented orator and a fighter for civil rights. Since that time, key chains and holders have undergone serious changes, to look like they do today. With the development of plastic manufacturing industry, which was observed in the 1950s -1960s, key chains became modern and unique, being produced not only of plastic, but of metal and other materials as well.

■ Lighters

First lighter was invented in 1823 with the effort of the famous German chemist Johann Wolfgang Dobereiner (1780 - 1849). His lamp which was soon named as "Döbereiner's lamp" marked the start of an era where fire could reliably be created in an instant. This device had simple design - zinc metal reacts with sulfuric acid, creating flammable gas hydrogen that burst to flame when it meets sparks at the mouth of the container. Because the device was very large, hard to use and highly dangerous, it never managed to gain large popularity and was produced only in limited quantities during its lifetime from 1823 to the end of 19th century.

Tools & Accessories

Some of the first primitive types of batteries can be traced all the way back to the Parthians around 250 B.C. The Parthians made a clay jar, filled it with vinegar, then put a copper cylinder inside of it with an iron rod sticking out of the top. This early type of battery was used to electroplate silver. But it wasn't until the late 1700s that scientists began conduct more serious experiments on electricity and its storage. Experiments were conducted that stored electricity or produced it, but none were able to create a continuous and controllable current of electricity, until the Italian physicist Alessandro Volta came along. In 1800, Volta created the first modern day battery when he built what came to be known as his voltaic pile. The pile was made of up of zinc and copper plates with vinegar- or brine-dampened pieces of leather or pasteboard placed in between each plate. The plates were then stacked in alternating order one on top of the other with the bottom plate and the top plate acting as the positive and negative terminals. The pile looked like a stack of coins and created a constant flow of electricity that was less intense than previous attempts and allowed scientists to use electricity in controlled ways. In honor of Volta's invention, his name is used as the unit of electromotive measurement known as a volt.

TOOLS

Bags

Bags have been around for hundreds of years and have been used by both men and women. Bags have been prevalent as far back as ancient Egypt. Many hieroglyphs depict males with bags tied around their waist. The Bible mentions pouches, especially Judas Iscariot, carrying one around, holding his personal items. In the 14th century, wary of pickpockets and thieves, many people used drawstring bags, in which to carry their money. These bags were attached to "girdles" via a long cord fastened to the waist. Women also wore more ornate drawstring bags, typically called hamondeys or tasques, to display their social status. The 14th-century handbags evolved into wedding gifts from groom to bride. These medieval pouches were embroidered, often with depictions of love stories or songs. Eventually, these pouches evolved into what is known as a chaneries, which were used for gaming or food for falcons. In the modern world, bags are ubiquitous, with many people routinely carrying a wide variety of them in the form of cloth or leather briefcases, handbags, and backpacks, and with bags made from more disposable materials such as paper or plastic being used for shopping, and to carry home groceries.
